ANTIDOPING COMMISSION

Mr. Kevin LIVINGSTON

U.S.A.

Lausanne, 23rd October 1997

2.4 mg/ml

Dear Mr. Livingston,

Following your drug test at the race "Tour de l'Avenir" on 11th September 1997 (7th stage), the analysis report of the Paris Laboratory has shown the presence of Nandrolone metabolites (19-Norandrosterone and 19-Noretiocholanolone).

Although we decided that the concentration (around 2 ng/ml) is low enough to not declare this case positive, we hereby would like to warn you for the future. In fact, should this concentration exceed 2 ng/ml, we will be obliged to ask your National Federation to open a procedure, according to the UCI Antidoping Examination Regulations.

Kindly asking you to take due note of the above, we remain,

Yours sincerely,

For the Antidoping Commission

Anna-Laure Masson
